

Programmable Logic Device (PLD)

~ Electronic component used to build reconfigurable digital circuits.

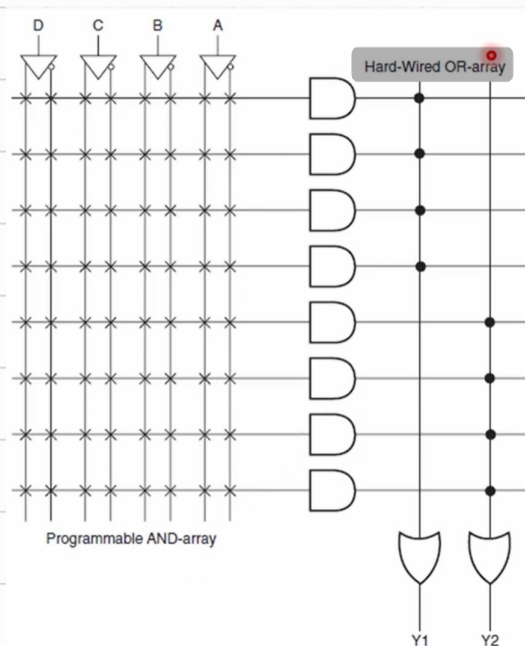

Programmable Logic Array (PLA)

A PLA have a limited # of AND / OR gates.

Programmable Array Logic (PAL)

[use less resource]

The improved version of PAL is Generic Array Logic (GAL)

Complex programmable Logic Device (CPLD)

- PLD with more features via having a macrocell that consists of high-lvl logic functions [flip-flops, ALU, registers, etc]
